## New Features / Improvements

---

This release includes the following changes:

Client Applications updated for latest Mac and Android OS compatibility

1. Updates for compatibility with iOS versions 11.0 through 14.6.
2. Updates for compatibility with Android versions 6 through 11.

## Fixes

---

1. PowerShare now correctly reports input values of -60 to 0.
2. Meter icon title is now visible when background is dark.
3. Fixed issue where PowerMatch output label causes CSR metering to crash or display wrong value.
4. Controls now scaled correctly after rotating CSR client
5. Fixed issue where CSR meters disappear.
6. CSR Builder opens design file with incorrect aspect ratio
7. Resolved overlay defect experienced in designs created in CSD 5.7 versions
8. Addressed upgrade compatibility issue bridging builds from 2.9 to 2.10
9. Optimized performance for iPad Pro devices running iOS14
10. Addressed error encountered when second room layout is added to CRR Combination

## Known Issues, Defects and Limitations

---

The following are the known issues and defects with this release. Information included here can be useful when troubleshooting issues with software or hardware operation:

Metering

1. CSR performance may decrease when more than 12 meters exist in a design.

## Minimum System Requirements
