

## **Bose Professional Launches New PowerShareX Amplifier Series**

*Collaboration with Powersoft Delivers High Impact in a Compact Footprint*

**ORLANDO, Fla. – June 14, 2023** – [Bose Professional](#) announces the PowerShareX series of adaptable power amplifiers comprised of the PSX1204D, PSX2404D and PSX4804D. Designed to deliver exceptional performance, these smart amplifiers, with Dante digital audio, offer 1200, 2400 and 4800 watts of rated power across four channels, providing the precise power and functionality required for a variety of applications. Building upon the success of the existing PowerShare amplifier range, the PowerShareX models bring even higher power levels and enhanced features, making them the perfect complement to Bose Professional loudspeaker systems.

PowerShareX amps easily integrate with Bose Professional DSPs, loudspeakers, and the entire ControlSpace ecosystem, ensuring design, configuration, installation and operation is simplified. Loudspeaker presets are factory-tested to optimize performance, allowing for quicker configuration; and ControlSpace Designer software provides visibility of the entire Bose Professional system from a single user interface for easy design, configuration, control and monitoring. All this means jobs are completed quicker, saving time and increasing productivity.

“Our deepening focus is on the technologies and solutions that help our customers create incredible audio experiences, faster and more efficiently,” said Adam Shulman, product lead for installed systems at Bose Professional. “By closely collaborating with Powersoft, an industry-leading amplifier brand, we’re able to develop products that are fully integrated into our ecosystem while taking advantage of a robust and proven technology platform.”

Each PowerShareX amplifier provides proven Powersoft technology ensuring every watt is utilized efficiently. PowerShareX distinct benefits ensure system designers have access to innovative power-sharing flexibility to dynamically allocate power evenly or asymmetrically across outputs; high peak power capability to deliver maximum output from all Bose Professional loudspeakers; and Dante connectivity to support up to four digital input channels and four analog inputs for line-level source connections — all within a space-saving 1RU design.

The collaboration between Powersoft and Bose Professional aims to provide customers with the best possible audio experience and performance.

“We are thrilled to cooperate with Bose Professional, a company that shares our vision for delivering the highest quality audio solutions,” added Luca Giorgi, sales and business development director at Powersoft. “The collaboration of Powersoft's proven technology and expertise in power amplification with Bose Professional's extensive sound experience and audio solutions, create a benchmark for the industry.”

The new PowerShareX family of adaptable power amplifiers will be available Q3 of 2023. For additional information and details on where to purchase, please visit [BoseProfessional.com/PSX](https://BoseProfessional.com/PSX).
