

ControlSpace® Remote v2.3

Release Notes

17 Sept 2018

Revision: 1.0

General

This release of ControlSpace Remote software adds the support for the following new features:

- Room Combine Group panels
- Parameter Set Lists

This release also contains the following defect fixes:

[Defects](#)

Room Combine Control Panels

Expand the Room Combine Groups and drag in Room Layouts to create control panels for room combining. Room Layouts can be reshaped as needed.

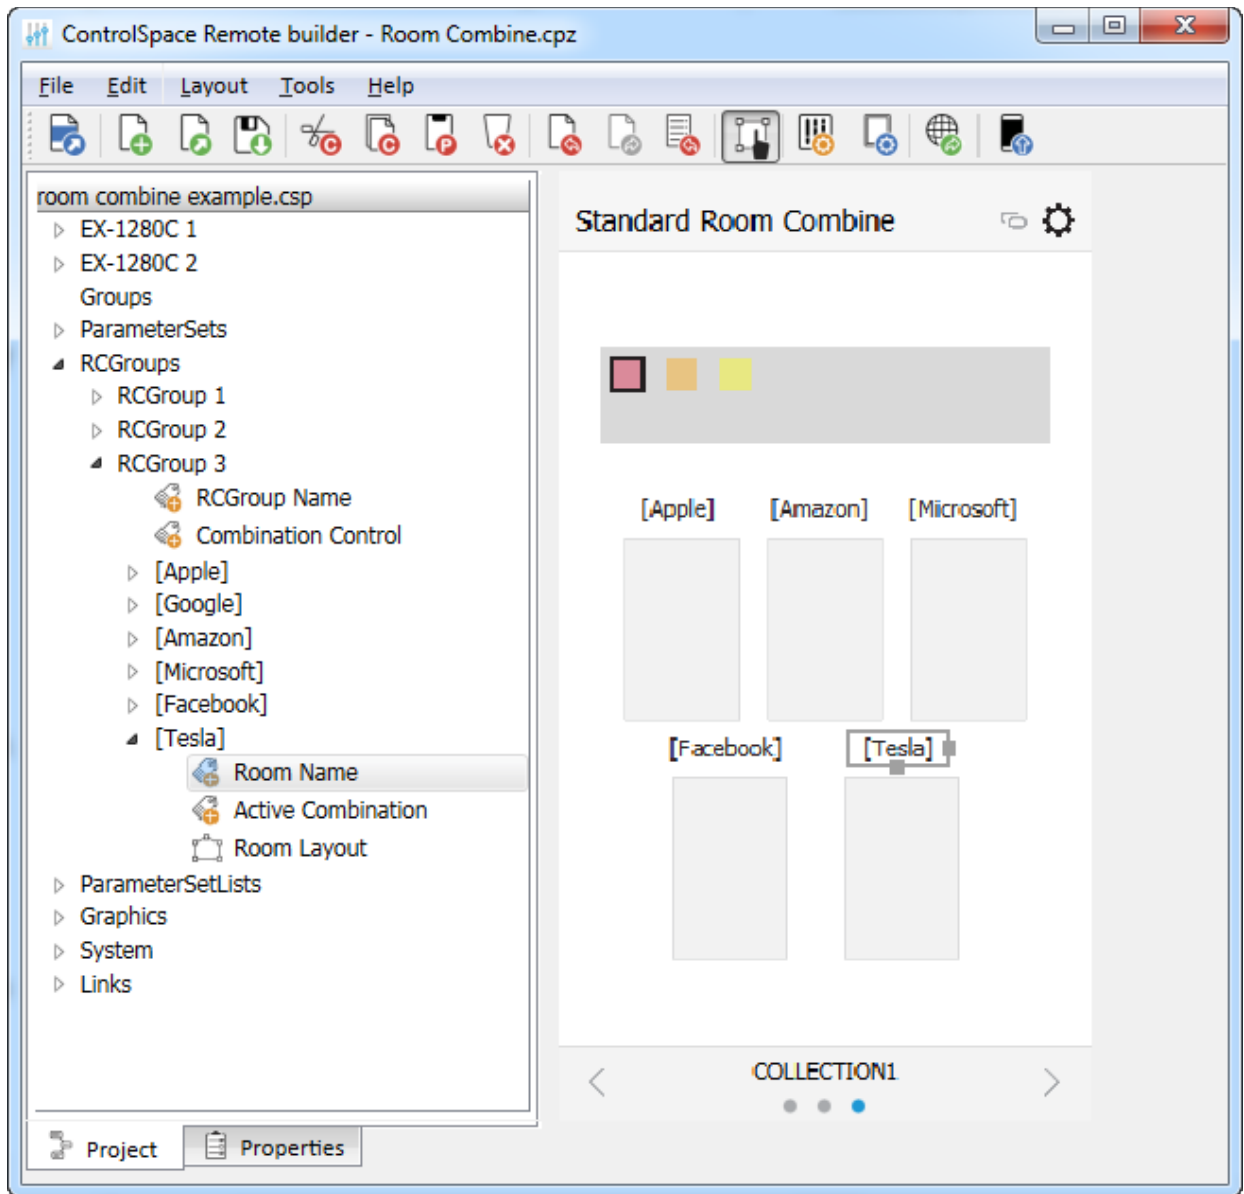

Figure 2 – Room Combine Group Combination Control

Parameter Set Lists

Parameter Set Lists allow parameter sets to be grouped, each group retaining its own state. In the example below, changing a “Bar” parameter set won’t affect the state of the “Dining” parameter sets. Add parameter sets as usual, or drag in an a ParameterSetLists pulldown

Defects Fixed in this release

- CSR can now reload a .csp file updated in CSD without affecting the project. Things like additions, deletions, and renaming are handled as you would expect. Controls update automatically for things like name changes.
- Minimum size for controls (15 height and width). Prevents users from accidentally sizing controls so small they can't be found and selected.
- Close the .csp file when the user chooses "New Remote App File".
- Fixed issues with the capability to move some controls in front of or in back of others.
